

# Can Restoro help me diagnose hardware problems?

Restoro Is a Windows Repair software and so the focus on detection of hardware problems is limited. Based on our vast experience in PC repair - we've realized that most PC problems are related to software. The elimination of so many software problems will allow you to isolate and diagnose many hardware failures.

If your free scan analysis turned out to be 100% all clear and you're still experiencing problems - you probably have some kind of a hardware problem and we recommend that you go to a PC repair technician.
