

# How do I fix Windows Update error 0x800b0101?

## Try these quick tips:

- Restart the computer and check for updates.
- Connect to a different network, preferably a wired one, and verify whether the *0x800b0101* error disappears.

If these don't work, head to the fixes listed next.

## 1. Run the Windows Update troubleshooter

1. Press `Windows + I` to open *Settings*, and then click on **Troubleshoot** on the right in the *System* tab.
2. Click on **Other Troubleshooters**
3. Locate Windows Update and click the *Run* button next to it.
4. Now, wait for the troubleshooter to identify and eliminate the problem automatically.

## 2. Correct the PC time

1. Press `Windows + I` to launch **Settings**, select *Time & language* from the navigation pane, and click on **Date & time** on the right.
2. Now, you can either enable the **Set time automatically** setting, or click on the *Change* button to manually configure it.
3. Choose the present date and time from the various dropdown menus, and click on **Change** to confirm.

## 3. Run the DISM and SFC scan

1. Open the Command Prompt as an administrator:
  - Press Windows key + X.
  - From the menu, select "Command Prompt (Admin)" or "Windows PowerShell (Admin)."  
This will open the Command Prompt with administrative privileges.

## 2. Run the DISM scan:

- In the Command Prompt window, type the following command and press Enter:

```
DISM /Online /Cleanup-Image /RestoreHealth
```

```
]
```

- The DISM tool will start scanning your system and repair any corrupted files it finds. This process may take some time, so be patient and let it complete.

## 3. Run the SFC scan:

- After the DISM scan is finished, type the following command in the Command Prompt and press Enter:

```
sfc /scannow
```

- The System File Checker will now scan your system files for any issues and attempt to repair them.

## 4. Once the scan is complete, restart your computer.
