

How do I install software without admin rights?

1. Download the software that you wish to install on a Windows 10 PC. In our example, we will install Steam.

It is recommended that you set the download location to the desktop for convenience. Else, if it gets downloaded in the **Download** folder, as is the usual case, drag it to your *desktop*.

This is just for convenience and has no bearing on the actual process.

2. Create a new folder on your **desktop** and drag the *software installer* into the folder.

3. Open the folder and **Right-click**, then *New*, and **Text Document**.

4. Launch the text file you just created and write the following codes:`set _COMPAT_LAYER=RunAsInvoker`
`Start SteamSetup`

Start SteamSetup

The screenshot shows a Notepad window titled '*New Text Document - Notepad'. The menu bar includes 'File', 'Edit', 'Format', 'View', and 'Help'. The text area contains two lines of code: 'set _COMPAT_LAYER=RunAsInvoker' and 'Start SteamSetup'. A red rectangular box highlights the first line of code. The status bar at the bottom indicates 'Ln 2, Col 17', '100%', 'Windows (CRLF)', and 'UTF-8'.

5. Here, **SteamSetup** needs to be replaced with the name of the *particular installer* that you

wish to install.

6. Save the text file with the **.bat extension** in the same folder location.

7. For that, click on **File**, then *Save As*.

8. In the **Save As** dialog box, replace the *.txt* file extension with **.bat**.

9. Click on **Save**.

10. Close the **Steam.bat** file.

11. Now, you can double-click the setup and follow the guidelines.

However considering you have already purchased Restoro and would like us to assist you in doing that utilizing a remote session, please contact our support and they will be happy to help you.
