How to disable or enable the touchpad?

The touchpad on a laptop is a convenient way to add the functionality of a mouse without needing an extra peripheral. When the touchpad is enabled or unlocked, the touchpad has the same functionality as an external mouse. When the touchpad is disabled or locked, the touchpad doesn't work, preventing the mouse cursor's accidental movement with your palm while typing. When disabled, the need for an external mouse is required.

1. Press the `Windows key`, type **touchpad**, and press `Enter`.
   Or, press `Windows key+I` to open Settings and choose **Devices**, then **Touchpad**.
2. In the *Touchpad Settings* window, click the **Touchpad** toggle switch to the **Off** position

However considering you have already purchased Restoro and would like us to assist you in doing that utilizing a remote session, please contact our support and they will be happy to help you.
