

How to fix "Compile Error in hidden module [module name]" in Microsoft Word?

This behavior occurs because an add-in in one of the startup folders is not compatible with Word.

To identify the add-in that may be causing the behavior, follow these steps:

- Quit all Microsoft Office programs, including Word and Microsoft Outlook.
- Open the following folder for depending on your version of Word.

For Microsoft Office Word 2010:

Program Files\Microsoft Office\Office14\StartupFor Microsoft Office Word 2007:

Program Files\Microsoft Office\Office12\StartupFor Microsoft Office Word 2003:

Program Files\Microsoft Office\Office11\Startup For Microsoft Word 2002:

Program Files\Microsoft Office\Office10\Startup For Microsoft Word 2000:

Program Files\Microsoft Office\Office\Startup

- Move any files that are located in that folder to your desktop.
- Open the following folder:

Documents and Settings\username\Application Data\Microsoft\Word\Startup

Move any files that are located in that folder to your desktop.

Restart Word.

If you encounter some difficulties following the steps above, considering you have already purchased Restoro or you are someone who is in need of assistance on your computer, please contact our support and they will be more than happy to assist you.
