

How to fix a File system error -1073740791 when trying to run a program as admin

The "**CheckHealth**" option with the DISM determines any corruptions inside the local image of Windows 10. However, this option does not perform any sort of repair.

To check the image of Windows 10 for issues with DISM, use these steps:

1. Open **Start**.
 2. Search for **Command Prompt**, right-click the top result, and select the **Run as administrator** option.
 3. Type the following command to perform a quick check and press **Enter**: ***DISM /Online /Cleanup-Image /CheckHealth***
-

The "**ScanHealth**" option performs a more advanced scan to find out whether the image has any issues.

To check image problems with the ScanHealth option, use these steps:

1. Open **Start**.
 2. Search for **Command Prompt**, right-click the top result, and select the **Run as administrator** option.
 3. Type the following command to perform an advanced DISM scan and press **Enter**: ***DISM /Online /Cleanup-Image /ScanHealth***
-

If there are problems with the system image, use DISM with the "**RestoreHealth**" option to automatically scan and repair common issues.

To repair Windows 10 image problems with DISM, use these steps:

1. Open **Start**.
2. Search for **Command Prompt**, right-click the top result, and select the **Run as administrator** option.
3. Type the following command to repair the Windows 10 image and press **Enter**:
DISM /Online /Cleanup-Image /RestoreHealth

- **Quick note:** It's a normal behavior if the command appears stuck. After a few moments, the process will be completed successfully.

However considering you have already purchased Restoro and would like us to assist you in doing that utilizing a remote session, please contact our support and they will be happy to help you.
