

How to fix apps that appear blurry in Windows 10?

If apps appear blurry or if a notification about blurry apps appears on your main display, follow these steps:

1. Do one of the following, depending on whether you're prompted with "Fix apps that are blurry?"
 - If the prompt appears, select **Yes, open Settings**, and then select **Apply**.
 - If the prompt doesn't appear, in the search box on the taskbar, type **advanced scaling settings** and select **Fix apps that are blurry**.
2. In **Fix scaling for apps**, turn on **Let Windows try to fix apps so they're not blurry**.

To find out if Windows can fix the problem, close a desktop app that appears blurry on your main display and then open it again.

Whether or not you've had blurry apps or have seen a notification about blurry apps, you can choose to turn this feature on or off any time.

1. In the search box on the taskbar, type **advanced scaling settings** and select **Fix apps that are blurry**.
2. In **Fix scaling for apps**, turn on or off **Let Windows try to fix apps so they're not blurry**.
