

# How to fix microphone not being detected in Windows 11?

If your microphone isn't detected after updating Windows 11, you may need to give your apps permission to use it. Here's how:

1. Select **Start > Settings > Privacy & security > Microphone** and make sure **Microphone access** is turned on.
2. Make sure **Let apps access your microphone** is turned on, then choose which apps have access. Desktop apps won't appear in this list.

If you want to give access to desktop apps, make sure that **Let desktop apps access your microphone** is turned on. You can't turn off microphone access for individual apps.
