How to fix missing settings app in the background apps list?

Windows 10 has an inbuilt background app named as 'Settings'. This app is required for many default apps of Microsoft. Some functionality doesn't work properly if it is disabled. We found that many people are complaining that are unable to locate this app in the background app list. If you are also missing this then below fix is to get back the 'Settings' app in the background apps. This may happen due to faulty Windows updates. Eventually, Windows 10 settings in not opening up.

Re-register the default modern apps using PowerShell

1. In start menu search box, type powershell. It will search for powershell command line app in the computer.
2. After searched, **right-click** on found powershell app and then click on "**Run as administrator**". After that, click on **Yes** if UAC asks for permission. A PowerShell command line app will be open up in front of you.
3. Run the following command in the powershell which is in green color.
   Get-AppXPackage | Foreach {Add-AppxPackage -DisableDevelopmentMode -Register "$($_.InstallLocation)\AppXManifest.xml"}
4. Restart computer. After restart, you'll get the settings apps in the background apps list. Restart is the mandatory, the 'settings' app should be there.
