

How to flip or rotate the screen on a Windows computer to fit your display

Because Windows 10 runs on devices with all sorts of form factors — from tablets and laptops to desktop monitors that physically rotate from landscape to portrait — Windows includes the ability to flip and rotate the screen to suit whatever display you're using.

1. Right-click the Windows desktop (on a blank space where there's no open program window) and click "Display Settings" in the pop-up menu.
2. On the Display page, if you have more than one monitor installed, choose the display you need to rotate.
3. Click the orientation drop-down and choose the rotation you need. You can choose Landscape, Portrait, Landscape (Flipped) or Portrait (Flipped).
4. If you accidentally choose the wrong one, press the Escape key to revert to the way it was before. If you like the change, click "Keep Changes."

However considering you have already purchased Restoro and would like us to assist you in doing that utilizing a remote session, please contact our support and they will be happy to help you.
