

How to Keep Your Computer Secure

Do use an antivirus software regularly. Everyone should use a virus checker. The best type of protection is continuous monitoring from a dedicated anti-virus program.

If you have a high speed Internet connection you need a firewall program. A firewall program keeps those who want to hijack your computer from gaining access to your system. You really do not want someone else running your computer. Your firewall should boot up with your computer to protect it from invasion.

However, as one of our valued customers, we would like to extend our service and provide you a quick resolution, please contact our Support team now, and they'll be more than happy to help you.
