

# How to Reduce Process Interference with Task Manager Efficiency Mode

1. Open Task Manager.
2. Click on Processes tab.
3. Expand the process tree group by clicking on the > for the intended app
4. Either click on the **Efficiency mode** on the command bar or right-click on a child process or an individual process.
5. The status column in the Processes tab should show “Efficiency mode” for the process & will show the new leaf icon for the parent process.

If “Efficiency mode” is greyed out, then its a core Windows process, and throttling that process may affect the system.
