

How to restore from a System Restore Point?

This option takes your PC back to an earlier point in time, called a system restore point. Restore points are generated when you install a new app or driver, and when you create a restore point manually. Restoring won't affect your personal files, but it will remove apps, drivers, and updates installed after the restore point was made.

1. In the search box on the taskbar, type control panel, and then choose it from the list of results
2. In the Control Panel search box, type recovery.
3. Select Recovery > Open System Restore.
4. In the Restore system files and setting box, select Next.
5. Select the restore point that you want to use in the list of results, and then select Scan for affected programs.
6. You'll see a list of items that will be deleted if you remove this restore point. If you're OK with the deletions, select Close> Next > Finish.

However, as one of our valued customers, we would like to extend our service and provide you a quick resolution, please contact our Support team now, and they'll be more than happy to help you.
