How to show file extensions in File Explorer

Microsoft hides file extensions by default, which makes life difficult for people who need to look for specific types of files, like JPEGs and JPGs.

To see file extensions in File Explorer, do the following:

1. Go to the **Search bar** at the bottom of the screen, and **type in File Explorer Options**, and click it. (There are a number of other ways to get here too, but that one seems fastest.)

2. In the window that pops up, click the **View tab**.

3. **Uncheck the box that says Hide extensions for known file types**. Click **Apply**, and **OK**. You should now see file extensions for all files in the File Explorer.

You can also use the File Explorer Options menu to choose to show empty drives, hidden files and folders, and more.

However, considering you have already purchased Restoro and would like us to assist you in doing that utilizing a remote session, please contact our support and we are happy to help you.
