

How to Stop Random USB Connect/Disconnect Noises in Windows

1. Check your sound settings
2. Disable the USB selective suspend setting
3. Use a different USB port
4. Update your USB drivers

Alternatively, you can also hit the **Uninstall device** button, if updating the drivers did not work. Restart your computer to reinstall the latest drivers.

If there are other outdated drivers in Device Manager, get the latest version for those drivers as well.

However considering you have already purchased Restoro and would like us to assist you in doing that utilizing a remote session, please contact our support and they will be happy to help you.
