

My computer is slow and freezes, what to do?

Sounds like your machine is over populated by software (malicious or otherwise) which hinders its ability to function correctly, we recommend maintaining a low percentage of fragmentation on your hard drive, at least 20% of free space at all times and to run a scan disk regularly.

However, as one of our valued customers, we would like to extend our service and provide you a quick resolution, please contact our Support team now, and they'll be more than happy to help you.
