

What to do if you hear the hard drive clicking sound?

If you can hear your hard drive clicking or making any other kind of sound, then you'll want to back up your data right away and replace your hard drive. This isn't the kind of issue that will get better on its own.

When your hard drive is clicking the physical damage has already been done. This most likely can't be replaced.

However considering you have already purchased Restoro and would like us to assist you in doing that utilizing a remote session, please contact our support and they will be happy to help you.
