What to do when Internet Browsing Is Slow or Unresponsive

If your internet is slow or unresponsive, it could be a combination of software and hardware issues.

- Check WiFi or LAN network connection if active and strong.
- Try to reboot your modem or router.

1. Unplug the router and the modem.
2. Wait at least 30 seconds.
3. Plug in the modem. If it doesn't power on in the first few seconds, press the Power button.
4. Wait at least 60 seconds.

- Clear browser history and cache.

However, considering you have already purchased Restoro and would like us to assist you in doing that utilizing a remote session, please contact our support and we are happy to help you.
